Nel presente fascicolo sono raccolti i risultati delle principali Osservazioni Meteorologiche fatte all'Osservatorio della R. Università di Torino nell'anno 1889; le altre osservazioni che si fanno giornalmente e i risultati ottenuti dagli strumenti registratori non possono trovar posto in questa pubblicazione annuale, e serviranno per una più ampia discussione sul clima di Torino.

Le notazioni e i simboli adoperati sono quelli generalmente in uso; la forza del vento è riferita alla scala 0 — 4; e la nebulosità del cielo alla scala 0 — 10.

Le meteore sono indicate coi simboli internazionali proposti dal Congresso di Vienna ed ora comunemente adottati.

Gli esponenti $^0$ e $^2$ indicano che la meteora è di poca intensità oppure fortissima.

Le lettere *n* e i numeri *I*, *II*, *III* significano rispettivamente che la meteora, alla quale si accenna, appare di notte oppure verso le $9^h$a, $3^h$p, $9^h$p.
